

ProjExec® 5

Social Project Management for IBM® Social Software

Accelerate project execution

ProjExec 5.0, winner of the 2011 Lotus Award for Enabling Innovation through Social Collaboration is the first and only social project management solution built on top of IBM social software as a seamless extension of the IBM Lotus collaboration platform. Social project management accelerates projects by getting people engaged, accelerating information sharing and making work observable across the enterprise social network. Time, cost and quality gains can be as high as 30%.

Socialize the project experience

What sets ProjExec 5.0 apart from other project management solutions is that it delivers an enjoyable social experience that people truly want to use. ProjExec 5.0 turns projects into social business activities with defined goals and commitments. It gets everyone in the enterprise social network involved and enables participants to share and learn by giving them visibility into what others are doing and by freely exchanging ideas and knowledge.

Engage through the Project Wall

ProjExec 5.0 includes the Project Wall - a unique innovation that gives a voice to everyone in the project community - from team member to project manager to partner or stakeholder. Contributions to the project community become a living project history that is visible to all. With a design purposefully similar to the Facebook user experience, the Project Wall empowers user engagement while ensuring that security and business constraints are managed with equal importance.

The Project Wall makes all project work and communications visible and accessible to the entire project community across the enterprise social network.

Social everywhere

ProjExec 5.0 does not stop with the IBM social collaboration platform. It brings the social project experience to where you work today. It enables teams to innovate and execute projects better and faster using familiar tools like email and mobile devices.

- **Email integration** – sidebars for **Notes**, **iNotes** and Outlook simplify task management and reporting
- **Mobile support** – work on the go with Blackberry, iPhone, iPad, Nokia, Android
- **Calendar integration** - personal work management with project tasks fully integrated with **Notes calendar**

Even reporting is social

ProjExec 5.0 makes progress reporting a social experience with one click update of task progress – from the Project Wall, your email, mobile device or enterprise portal - to keep project status up to date simply and efficiently. Just one click will update task status with automatic roll up and instant consolidation of project portfolio views. Exception-based management and alerts help identify at a glance when anything is veering off plan so prompt corrective action can be taken.

Robust and rigorous professional project management

Social project management doesn't mean sacrificing the robustness and rigor of professional project management. ProjExec 5.0 is first and foremost an industrial strength project management solution. With ProjExec 5.0, there is no rip and replace for project management professionals.

- **Compatibility with existing PM tools** – complete bi-directional integration with Microsoft Project and other popular PM tools.
- **Scalable and secure** - scales to accommodate large waterfall projects with thousands of tasks and users.
- **Embedded professional PM tools** - visual Gantt editor, Resource management and Financial management modules insure that ProjExec 5.0 is complete and robust project management.
- **Cross-organization resource management** - locate qualified and available resources with seamless integration with Lotus Connections.

Turn social into business value

ProjExec 5.0 lets you achieve repeatable success by supporting knowledge reuse and process improvement. Reusable project templates and the highly configurable design enable organizations to execute projects better and smarter using time-tested and rigorous project management methodologies fully integrated with a social collaboration dimension that fosters innovation, promotes participation, knowledge sharing and smarter collaboration.

In a recent study to determine Web 2.0 ROI, McKinsey found that «Web 2.0 seems to promote significantly more flexible processes at internally networked organizations: respondents say that information is shared more readily and less hierarchically, collaboration across organizational silos is more common, and tasks are more often tackled in a project-based fashion.» This highlights the strategic value of social project management as a key accelerator for social business.

Platform availability

ProjExec 5.0 runs with:

IBM Lotus Quickr 8.5+
IBM Lotus Connections 3.0
IBM WebSphere Portal 6.1.5 and 7.0
